

- Abortionists are paid by mothers or by governments on their behalf to kill their children and paid again by researchers for the body parts.
- Because Canadian abortions are paid for by tax-funded health care programs all Canadians are partners in this grisly business.

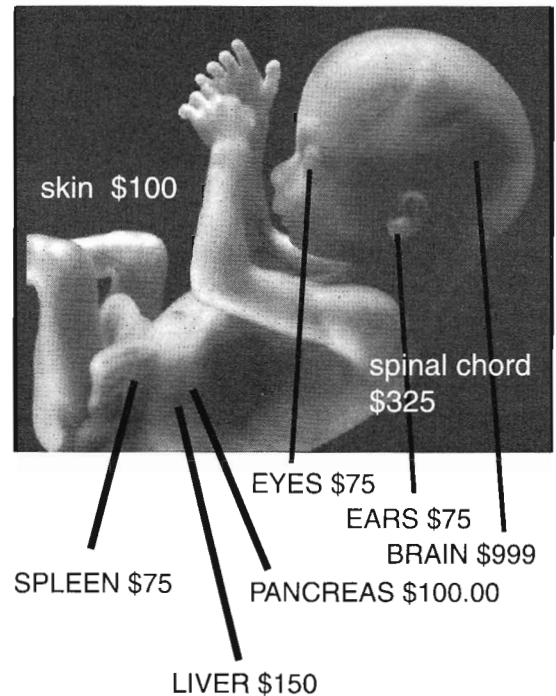

WHERE IS THE PROOF ?

Research by the Alberta based *Western Report* recently uncovered evidence of trafficking in aborted baby body parts. Even more disturbing was the evidence provided by Mark Crutcher of Life Dynamics in Texas, which cited factual examples of doctors ordering specific organs from abortion clinics, even specifying a desired point in the pregnancy when organs were to be removed. The word "fresh" is often used to denote those organs removed prior to or immediately after the baby has been killed. Celeste McGovern in her article in the *Western Report* states, "... (name)... a geneticist who operates a fetal tissue repository at the University of Alberta Hospital in Edmonton ... has the difficult task of sorting through 10-12 week fetal remains from abortion clinics in Edmonton and Winnipeg, dissecting recognizable body parts for hearts and eyes, extracting messenger ribonucleic acid and shipping it to other geneticists at the University of Toronto and British Columbia."

MEDIA RESPONSE ?

Despite three CLC Press Releases, the media has virtually ignored the story. The Press Releases and the price list of body parts put a lie to what the media have reported for years, that the child before birth is only a "blob of tissue" or a "collection of cells."

And this is called CHOICE?

A highly profitable industry has sprung up around the use of late term aborted babies

Did you know

- A baby is not legally considered to be a 'person' until he/she has emerged fully from the birth canal, and is completely separated from his/her mother?
- Abortion is allowed in Canada at any time during the full nine months of pregnancy
- While most abortions are committed in the first trimester (3 months gestation) many are performed much later in the pregnancy. Unborn children's body parts are bought and sold in Canada. "Harvested" children are used for medical research.
